**Microsoft 365 Copilot**

# Agents Hackathon

Setup / access sandbox

# Conditions and terms of use
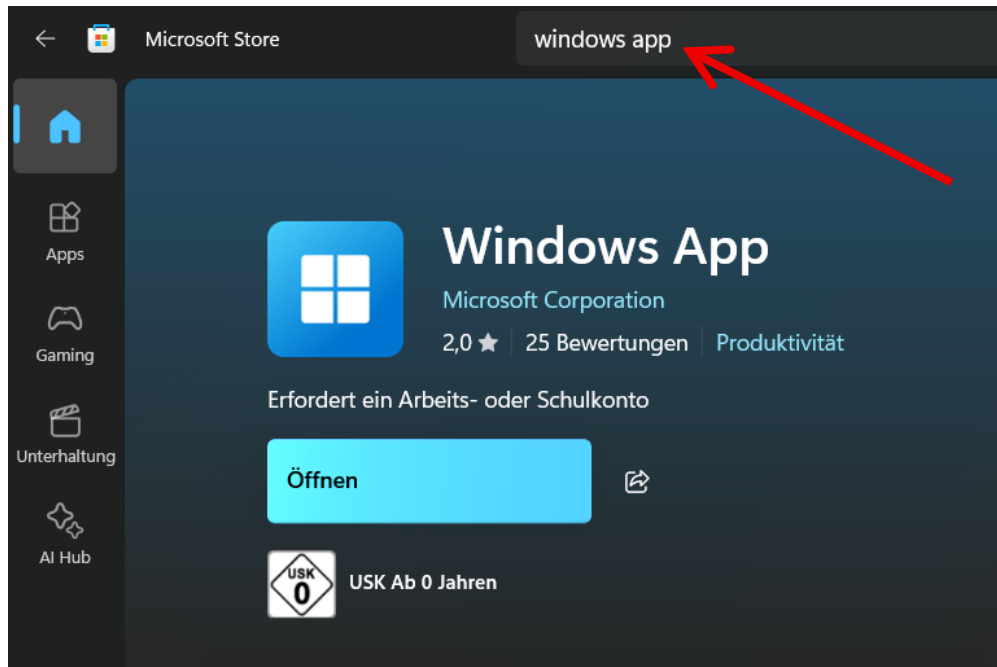

# Setup / access sandbox

You have two options to access the sandbox environment:

- "Windows" app (Remote Desktop): This is the most convenient way but requires the installation of the app. <span style="color:red">Please reach out for your internal IT department for support with the Windows app. It is very common that you are not allowed to install apps from the Windows Store.</span>

- Web browser: may require some more authentications but should work for everyone. You can find the instruction in the second half of this document

# 1. Install the Windows App

If possible / allowed, install Windows app from the Microsoft Store:

https://apps.microsoft.com/detail/9N1F85V9T8BN?hl=de-degl=DEocid=pdpshare

For MacOS, please follow the instructions:
https://support.microsoft.com/en-us/topic/use-the-windows-app-to-connect-to-a-cloud-pc-on-macos-with-full-keyboard-access-26627a45-7a8d-435c-8eb8-b3cf44a34943
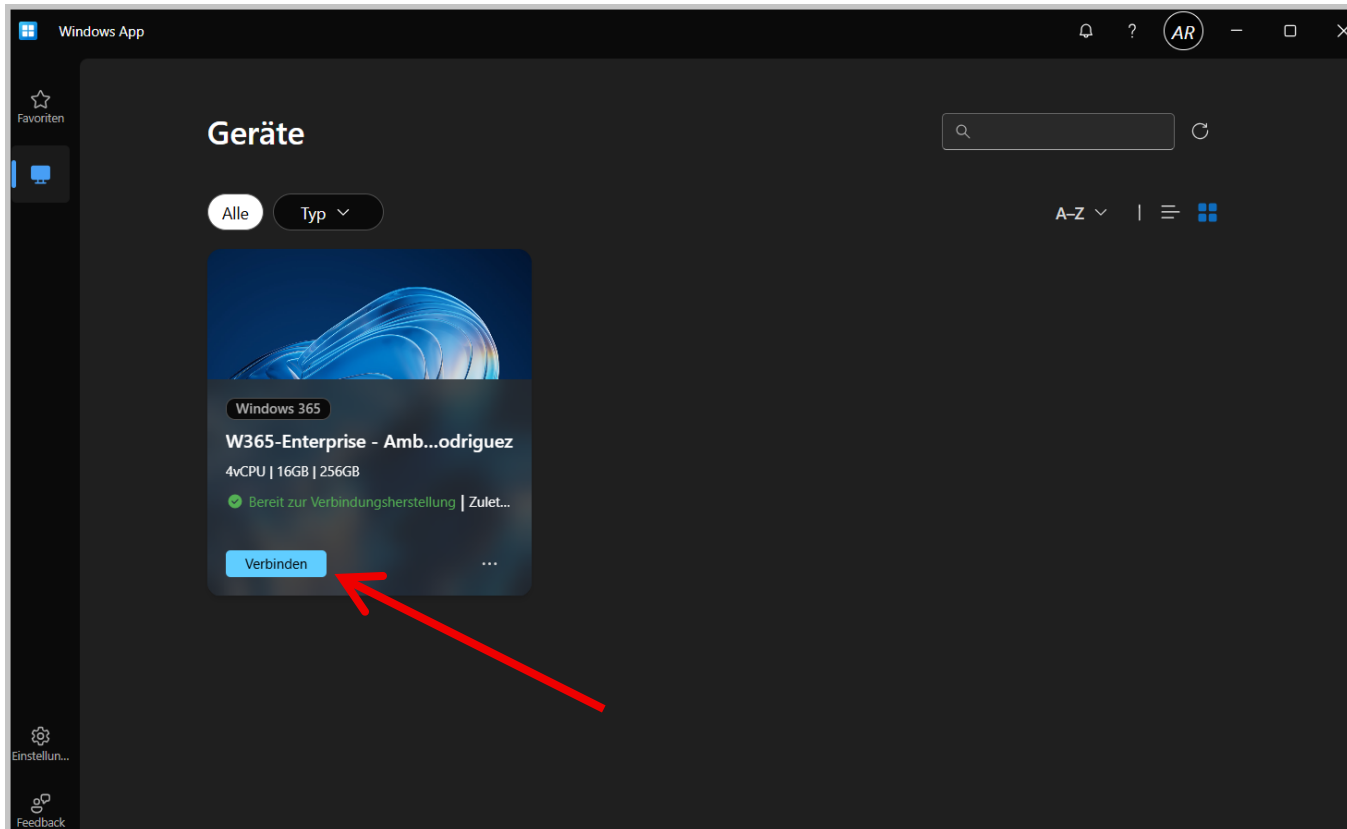

# 2. Sign-In with the provided credentials

The credentials will be provided at the beginning of the event!
**In the most cases, you are automatically logged in with your own enterprise credentials**. In that case, please switch to the provided sandbox credentials:
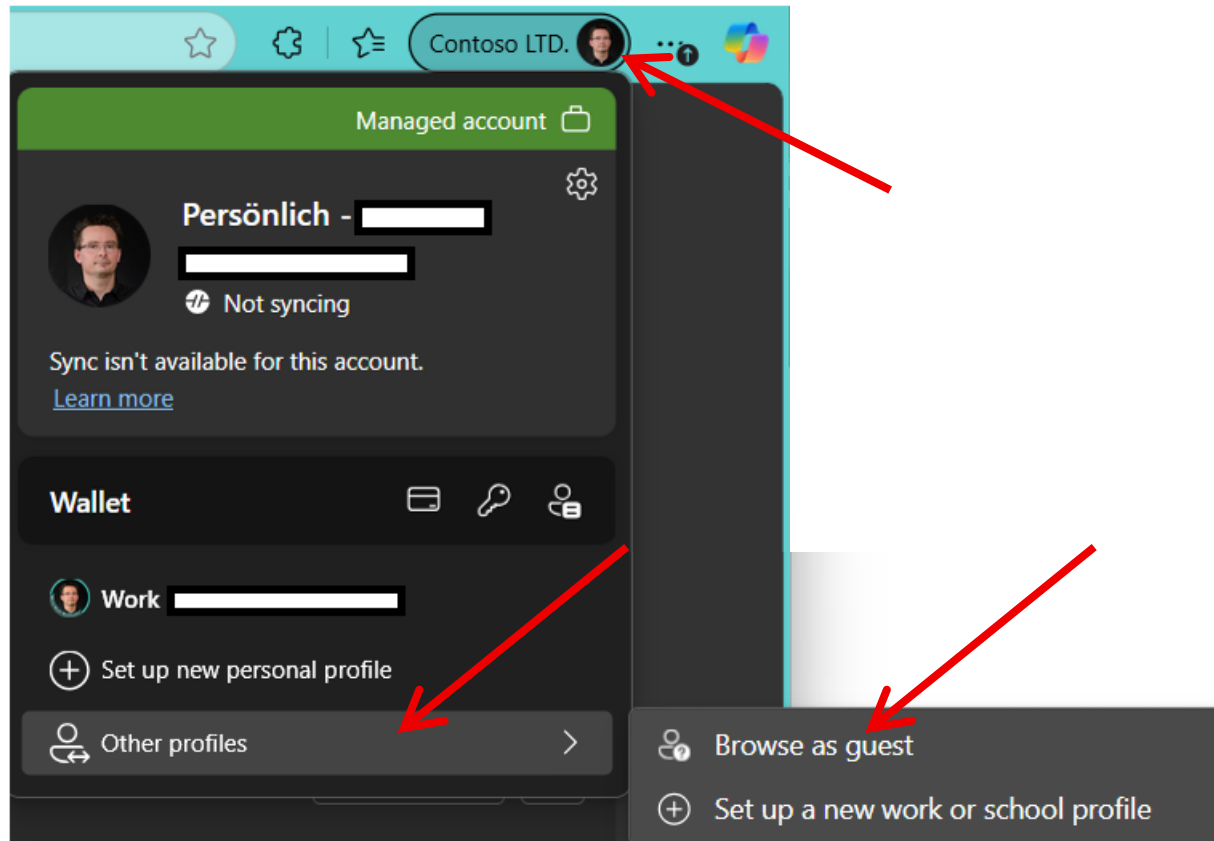

# 3. Connect with Windows 365

After the first login, the W365 VM gets provisioned. This can take up to 10 Minutes until the connection is possible.

# 4. Connect with your browser (optional)

This is only necessary if you cannot use the Windows app!
It is recommended to use a "privat" or "guest" browser session to avoid interreferences with your company login. If you are familiar with browser profiles, you can setup a new profile as well.

# 5. Setup your browser (optional)

This is only necessary if you cannot use the Windows app!
It is **highly recommended** to use an English language profile in your browser! Otherwise, it might be difficult to translate some parts of the exercises.
